

Lateral packers

- high flexibility
- sturdy spherical heads
- very good bending characteristics
- increased slipping qualities

The intelligent solution that saves money.

Vetter lateral packers are the ideal solution for pipes with small diameters, especially pipelines in the building lateral area. The flexible construction ensures good slipping qualities, bending characteristics and handling. That facilitates quick application, reducing your working hours. The open safety coupling with a lock pin prevents unwanted decoupling. The spherical heads are vulcanised in.

The lateral packers are available in 3 sizes from 70 - 200 mm (2.7 - 8 inch) and lengths up to 4 m (13.2 ft.).

Technical Data

Operating pressure: 2,5 bar (36,25 psi)

Product	Art.-Nr.	0	1	2	3	4	5	6
